

PUT SPREAD MEANS
BUYING AND SELLING
PUT OPTIONS.

We create a **Bull Put Spread** when we are expecting the markets are going to go up. Based on our analysis, if we expect the market to stay bullish, put bull spread is alternate method to profit from the same.

Similarly, we create a **Bear Put Spread** when we expect that the markets are going to go down. Bear Put Spread is created using a combination of put combination. We profit when the price of the asset goes down.

Let us discuss these strategies in-depth one by one.
