

separate facts from suggestions. Use concise Indian English unless I request otherwise. Prefer tables, checklists and step-by-step outputs."

This one paragraph will improve most workflows because it sets behaviour before the task begins.

Build your prompt library

A prompt library is your personal collection of reusable instructions. It saves time and improves consistency. Start with five prompts.

Prompt 1: Daily briefing

"Act as my daily briefing assistant. Use the notes, tasks and documents I provide. Create a short briefing with five sections: urgent items, important but not urgent items, waiting-on items, suggested focus for today, and questions I need to answer. Do not invent deadlines. If something is unclear, flag it."

Use this in the morning with your notes, email summaries or project updates.

Prompt 2: Meeting summary

"Turn this meeting transcript or notes into a clear summary. Include decisions made, action items, owners, deadlines, unresolved questions and follow-up message draft. If an owner or deadline is unclear, mark it as unclear instead of guessing."

This works for office meetings, college projects, interviews or event planning calls.

Prompt 3: Document analyst

"Analyse the uploaded document for a busy reader. Give a 150-word summary, key facts, important numbers, risks, possible follow-up questions and action items. Do not add information not present in the document."

Use this for reports, policies, circulars, proposals, research papers or brochures.

Prompt 4: Drafting assistant

"Draft a response based on the information I provide. Match this tone: clear, polite, direct and professional. Keep it under the requested length. Do not overpromise. Do not include facts I have not provided. End with a clear next step."

This is useful for emails, WhatsApp Business replies, vendor follow-ups and client communication.

Prompt 5: Review assistant

"Review the previous output. Identify weak points, assumptions, factual risks, unclear sections, missing information, privacy concerns and actions requiring human approval. Then suggest a corrected version."

This is the most underrated prompt in the system. It turns AI from a first-draft generator into a review partner.

Build the personal admin agent

Now let us combine these into one flagship workflow: the Personal Admin Agent. This is the safest and most useful first system for most readers.

Its job is not to control your life. Its job is to reduce scattered mental load. It collects inputs, organises them, drafts outputs and gives you a reviewable plan.

Step-by-Step: Create your personal admin agent

Step 1: Define the purpose

Write: "This agent helps me organise daily work, summarise information, prepare drafts and maintain a task list."
