

Choosing the right cloud backup

Pick what works for you, nothing else matters

By the time most people start paying for online storage, they are in mild distress. Their phone says storage is full. Google Photos has stopped backing up. iCloud is sending increasingly passive-aggressive warnings. OneDrive is quietly nudging them to protect Desktop and Documents. Someone in the family cannot receive email because Gmail storage is packed.

And this is exactly how bad cloud decisions are born.

People do not usually choose a storage service by asking, “Which platform best fits my devices, backup habits, family structure, and file types?” They choose by panic, brand loyalty,

or whichever notification annoyed them most recently. That is understandable. It is also how you end up paying for the wrong cloud plan for years.

The good news is that for most Indian readers in 2026, the real shortlist is quite manageable: Google One, iCloud+, and OneDrive. Each has a clear personality, a clear ecosystem bias, and a clear kind of user it suits best. Official India pricing also makes the comparison easier than it used to be: Google One lists 30GB at ₹59/month, 100GB at ₹130/month, and 2TB at ₹650/month; Apple’s iCloud+ in India starts at 50GB for ₹75/month, 200GB for ₹219/month, 2TB for ₹749/month, and goes higher;
