

DIVERSIFY YOUR INDIAN PRODUCTIVITY STACK

While Zoho's ecosystem is impressively comprehensive, pairing it with other best-in-class Indian tools can round out your workflow and address more specific needs:

1. greytHR

India's flagship HR and payroll platform, greytHR automates everything from attendance and leave management to statutory compliance (PF, ESI, TDS) and payroll runs. With customizable leave rules and self-service portals, it reduces manual HR overhead for over 3,000 organizations.

2. n8n

An open-source, self-hostable workflow automation tool gaining traction in India's startup scene. n8n lets you visually connect apps and services – triggering tasks like “when a Zoho Sheet row is added, send a JioMeet invite” – all without writing code.

3. Signzy

A RegTech innovator offering AI-powered eKYC, digital onboarding, and paperless eSignatures. Signzy's bank-grade workflows let you verify identities, capture digital signatures, and manage document lifecycles securely – ideal for fintech and lending startups.

4. DigiBoxx

India's homegrown cloud-storage service, offering 20 GB free on local servers. Use it to back up critical documents, sync folders across devices, and share large files within your team – keeping data sovereign under Indian regulations.

5. Quick Heal Total Security

Protect workstations and mobile devices with Quick Heal's enterprise endpoint solution. Features include real-time malware scanning, web-protection, and data-loss prevention, ensuring your documents and communications stay secure as you collaborate.

6. greytip eSign

Complementing greytHR, greytip's built-in eSign module (powered by eMudhra) lets you send employment contracts, NDAs, and HR policies for Aadhaar-verified signatures directly from the platform – streamlining your employee onboarding.

By integrating these specialized Indian tools alongside Zoho Workplace, you build a best-of-breed, locally sovereign stack – automating HR, securing endpoints, streamlining compliance, and connecting disparate systems to work smarter.

2. Sign Up: Register with your Jio mobile number or email, verify via OTP.

3. Schedule:

- Click Schedule → enter Meeting Title, Date/Time, and Participant Emails.
- Enable Multilingual Invite to send in Hindi, Tamil, or other supported languages.

4. Host Controls:

- **Waiting Room:** Enable to vet attendees.
- **Mute All** or **Lock Meeting** once all participants join.

5. Join: Click the meeting link or enter Meeting ID in the app.

Flock: Messaging meets task management

Founded by Bhavin Turakhia in 2014, Flock provides team chat, video conferencing, shared to-dos, polls, and integration with over 50 external apps (Google Drive, Trello, GitHub) through Flock App Store.

Quickstart with Flock

1. **Sign Up:** Visit <https://flock.com>, register with a work email, and verify your domain.
2. **Create Channels:** Use #general, #project-x, etc., to organize conversations.
3. **Direct Messages & Groups:** Click New Conversation → select team members.
4. **Video Calls:** In any chat, click the Video Call icon to launch an HD call (up to 20 participants on free plan).
5. **Shared To-Dos:**
 - Click + in chat → Create To-do → assign to team members with due dates.
 - Track progress under Tasks in the sidebar.

Zoho Meeting & Webinar

For webinars and training sessions, Zoho Meeting (launched in 2007) supports up to 250 attendees on paid plans, with screen sharing, polls, and Q&A features. To host a webinar:

1. Access Meeting from Zoho Workplace.
2. Choose Webinar → set Topic, Date/Time, and Registration Settings.
