

Utilities & Cloud Apps

Indian-made web browsers, storage and other tools

India's utility app ecosystem has matured beyond mere novelty: today's homegrown browsers, cloud storage, file-sharing, and security tools rival global incumbents by offering privacy, regional customization, and data sovereignty. JioPages (now JioSphere) provides an Indian-centric mobile browsing experience – complete with ad blocking, eight Indian-language UIs, emoji-domain support, and PIN-protected incognito mode.

For desktop privacy, the Epic Privacy Browser blocks trackers, fingerprinting, and cryptomining by default, leaving no browsing traces upon exit. In cloud storage, DigiBoxx – launched in December 2020 under NITI Aayog aegis – boasts database-level encryption and local-server data residency, reaching 1 million users within six months. Teams seeking collaboration can turn to Zoho WorkDrive, which offers desktop sync, granular access controls, and real-time editing for any file type.

For peer-to-peer transfers without ads or data loss risks, JioSwitch replaces ShareIt with seamless Wi-Fi Direct transfers across iOS and Android. Together, these tools illustrate India's progress toward self-reliant, privacy-first digital utilities – ensuring users have sovereign, secure, and feature-rich options at their fingertips.

1) Web browsers (Proudly Indian)

JioSphere: The new face of JioPages

JioPages, relaunched in mid-2025 as JioSphere, remains Reliance Jio's flagship mobile browser, now “redesigned” for deeper Indian customization while preserving its core privacy ethos.

1. Download & Install

- Android/iOS users can search “JioSphere” in their app store and tap Install.
