

- Sign Up using your mobile number and verify via OTP.
- On first launch, permit Device Admin to enable anti-theft features (remote lock/wipe) and Accessibility permissions for App Lock.

2. Core Security Features

- **Quick Scan & Deep Scan:** Instantly scan all installed apps and files for viruses, Trojans, ransomware, and spyware; Deep Scan probes system folders and archives.
- **Real-Time Protection:** Continuously monitors downloads and newly installed apps, blocking malicious content before it can run.
- **App Lock:** Secure sensitive apps – WhatsApp, Gmail, Photos – behind a PIN or pattern lock to prevent unauthorized access.
- **Privacy Advisor:** Evaluates installed apps for risky permissions and privacy leaks, offering actionable recommendations.
- **Anti-Theft:** In case of loss or theft, remotely lock your device, locate it via GPS, or wipe data using the metaProtect web console.

3. Device Optimization & Cleaner

- **Device Cleaner:** Identifies and deletes residual cache, obsolete APKs, and large media files to reclaim storage space.
- **Battery Saver:** Detects power-hungry apps and suggests power-saving modes to extend battery life.
- **Screen Time:** Monitors app usage, allowing you to set daily limits and receive usage reports – ideal for managing digital well-being.

4. Safe Browsing & Network Security

- **Secure Wi-Fi Network:** Analyzes Wi-Fi hotspots for vulnerabilities (open ports, weak encryption) before connecting.
- **Safe Browsing:** Blocks phishing sites and malicious URLs in real time, protecting online transactions and personal data.

5. Advanced Controls

- **YouTube Supervision & Smart Parenting:** Enables parents

to supervise children's YouTube viewing and set screen-time schedules.

- **Security & Privacy Scores:** Provides an overall digital health report, with granular tips to improve security posture.

By combining proactive malware defense with built-in optimization tools, Quick Heal Mobile Security not only protects your device but also keeps it running smoothly – eliminating the need for multiple third-party cleaners or security apps.

4) Navigation and maps

While Google Maps remains ubiquitous, India's mapping pioneers offer alternative apps with hyper-local detail and innovative features tailored to the Indian user. Mappls (formerly Jio-Maps) from MapmyIndia stands out with its precise navigation, door-step level routing, and integration of ISRO's high-resolution satellite imagery.

Mappls: India's swadeshi navigation

Mappls, developed by MapmyIndia since 1995, provides an end-to-end mapping solution with features unmatched by global competitors.

1. Installation & Onboarding

- **Download** "Mappls – MapmyIndia" from the Google Play Store or App Store and tap Install.
- **Permissions:** Grant Location, Storage, and Phone permissions for full functionality.
- **Language Selection:** In Settings → App Language, choose from English, Hindi, or other regional interfaces.

2. House-Level Addressing & Mappls Pin

- **House-Level Search:** Tap the Search bar and enter a house or building number (e.g., "123 MG Road, Bangalore"); Mappls Pin displays the exact doorstep location on the map.
- **Save Locations:** Long-press any point and tap Save → Add to Home/Work for quick future access.
