

Emerging Indian apps

Enabling access to new tech and services

In the past two to three years, India's startup ecosystem has delivered an impressive array of innovative apps across diverse sectors – fashion tech, travel, AI, healthcare, and creator economies. Each of these emerging platforms has secured significant funding, won government or industry accolades, and quickly gained traction among early adopters. From Virgio, which pivoted from fast fashion to circular models, to Digi Yatra, India's first airport biometric boarding app; from AI firms like Sarvam AI and Neysa building vernacular language models and cloud GPU services, to MrMed, simplifying access to specialty medicines; and Rigi, empowering influencers to monetize their communities – these apps exemplify the next wave of Indian innovation. Below, we spotlight six such apps launched since 2022, detailing their unique propositions and how you can explore them today.

1. Virgio (Fashion Tech, 2022)

Virgio, founded in early 2022 by former Myntra CEO Amar Nagaram, started as a fast-fashion label before pivoting to sustainable, circular fashion in late 2023. Targeting Gen Z and millennials, Virgio's app showcases limited-edition drops, AR-powered try-ons, and a "Return & Recycle" program: customers send back used garments for store credit. With \$37 million raised to date and a current valuation of \$161 million, Virgio blends e-commerce convenience with eco-friendly practices. To try Virgio:

1. **Download** from Google Play or iOS App Store.
2. **Sign Up** using email or mobile OTP.
3. **Browse Collections** by season or sustainability filter.
4. **Use AR Try-On:** Tap the camera icon, select a garment, and see it virtually overlaid on your live image.
5. **Recycle:** Go to Returns → Recycling, schedule a pickup, and earn credits.
