

Productivity & Office Tools

Building a fully Indian app-driven work ecosystem

Indian SaaS and productivity tools have matured into robust alternatives to global incumbents. Zoho Office Suite & Workplace leads with over 100 million users worldwide and \$1.4 billion in 2024 revenue, offering document, spreadsheet, presentation, email, chat, and invoicing apps under one roof. For real-time collaboration, JioMeet provides unlimited free meetings – up to 100 participants for 24 hours at a stretch – with multilingual support and enterprise controls, while Flock delivers integrated team messaging, video calls, and task management with apps and integrations to streamline workflows.

Essential utilities like Kaagaz Scanner (trusted by over 30 million users) enable ad-free, secure PDF scanning

and editing on mobile, and AIR Scanner guarantees on-device storage and AI-powered reading assistance without sign-in. For notes and task tracking, Zoho Notebook's card-based interface syncs across devices and even migrates Evernote content in one tap, while Zoho Projects and home-grown platforms like TaskOPad cater to Kanban and to-do list needs for individuals and teams. Throughout this chapter, you'll find detailed, step-by-step guides to migrate your workflows, create and collaborate on documents, host immersive video meetings, scan and manage documents, and organize your tasks – all using Indian apps built for your needs.
