

Large Language Models (LLMs)

As capable as they are large

Consumer Interactions

In 2024, Large Language Models (LLMs) have transformed consumer-focused applications by delivering hyper-personalized and dynamic experiences. Key players have adopted advanced conversational AI to cater to diverse use cases across industries. Below, we explore the most notable developments:

Alexa Pro (GPT-5.5): Enhanced conversational abilities with emotion-based responses

Alexa Pro now integrates GPT-5.5, enhancing its ability to detect and adapt to users' emotional states through tone, word choice, and context. This upgrade provides a seamless user experience.

such as recommending relaxing music after detecting stress in a user's voice. The platform's ability to remember long-term preferences and engage in multi-turn conversations enables tailored interactions for families and professionals alike. Alexa Pro saw a 30% increase in user engagement in 2024, driven by these features.

Google Bard Advanced: Multilingual voice inputs and regional insights in real-time

Google Bard's 2024 iteration introduced multilingual voice inputs and region-specific insights, making it an indispensable tool for travellers, expatriates, and global businesses. By under-
