

Locking it all in

Upgrades, calibration, care, and future-proofing

You've picked the TV, dialed in the audio, sorted streaming, even flirted with a projector. Now comes the part that separates the casual setup from a system that stays delightful for years: locking it in. This chapter is a pragmatic, do-right-now plan – calibration, quick wins, reliability upgrades, safe-listening habits, privacy controls, energy savings, maintenance rhythms, and a 24-month roadmap – so your living room keeps sounding and looking brilliant without constant tinkering.

One-evening tune-up checklist

A. Calibrate HDR where you actually game and watch

- **PlayStation 5 / PS5 Pro:** On the console, go to Settings ▶ Screen & Video ▶ Video Output ▶ Adjust HDR and follow

the steps (do this per display). This ensures highlights aren't clipping and shadows aren't crushed.

- **Xbox Series X|S:** Install/run HDR Game Calibration (Settings ▶ General ▶ TV & display options) and follow Micro-
