

2. CapCut

Platforms: Android, iOS

Why you'll love it: The secret weapon of content creators, vloggers, and Instagram editors.

Originally built for TikTok creators, CapCut has exploded as a full-fledged video editor used by everyone from influencers to amateur filmmakers. It features multi-track timelines, AI-powered background removal, auto-captions, dynamic transitions, music libraries, and export in up to 4K – all completely free, and with no watermark.

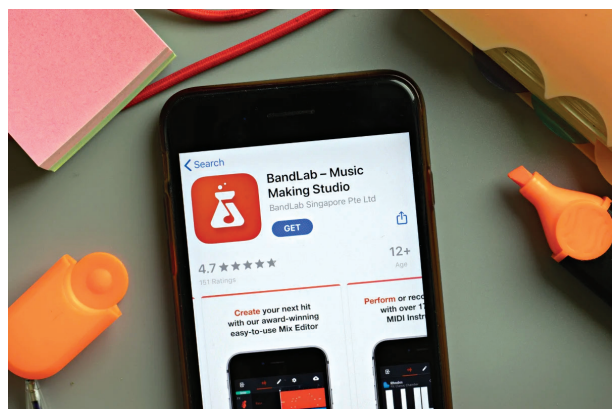

It works especially well for short-form content, but you can just as easily edit a YouTube video or cinematic trailer with it.

CapCut uses AI to generate automatic subtitles in multiple languages, dramatically speeding up post-production for creators working in international markets.

3. BandLab

Platforms: Android, iOS

An entire music studio in your pocket, with social collab built in. BandLab is a full DAW (Digital Audio Workstation) that lets you record, mix, and master tracks on your phone using multi-track editing. You can add built-in virtual instruments, loops, effects, and vocal tuning – and even publish or collaborate with other musicians via BandLab's global platform.

If you've used GarageBand or FL Studio, you'll feel right at home here – but you'll be surprised that BandLab offers unlimited cloud storage and version history, all free.

The AutoPitch feature lets you tune your vocals in real time, with built-in presets for pop, trap, or retro tones – ideal for mobile demos or recording on the go.

4. Dolby On

Platforms: Android, iOS

Studio-quality sound recording in one tap, no setup needed. Created by Dolby, the same company behind surround sound in cinemas, Dolby On turns your phone into a high-fidelity audio recorder with automatic noise reduction, EQ, stereo widening,

and dynamic leveling. It's ideal for musicians, podcasters, or even students recording lectures.

The best part? It's all automatic. Just tap "record" and let Dolby's algorithms do the rest. You can also livestream directly to Facebook or Twitch using the same processing for crystal-clear streams.

The built-in mastering lets you choose presets like "Natural," "Lyric," or "Deep" for quick enhancement of your recordings, with export options for WAV or MP3.

5. Desygner

Platforms: Android, iOS

Graphic design made effortless – templates, assets, and layer editing all included. Desygner is a hidden gem that competes with Canva, but with a more intuitive mobile-first approach and a massive library of over 1,500 free templates. Whether you're creating a resume, business card, YouTube thumbnail, or social media graphic, Desygner lets you do it all with drag-and-drop ease.

It supports layered editing, free commercial-use stock images, and even the ability to create animated posts.

You can import and edit PDFs in Desygner – a lifesaver when you need to make quick design tweaks to resumes, presentations, or marketing flyers on mobile.

6. ibis Paint X

Platforms: Android, iOS

A professional-grade drawing app loved by manga artists and illustrators. ibis Paint X has earned cult status in the digital art world for good reason. With 15,000+ brushes, full layer support, stabilizers, blending modes, and perspective rulers, it rivals desktop illustration tools – yet it runs smoothly on modest phones. Whether you're sketching characters, painting scenes, or doing linework, ibis Paint X offers intuitive tools backed by pro-level control.

There's also a large community and tutorial library for beginners and hobbyists. ibis Paint X includes a screen recording playback of your art sessions – great for sharing your drawing process or analyzing your workflow later.

7. SketchBook

Platforms: Android, iOS

A premium drawing app by Autodesk, now completely free. SketchBook used to cost money, but Autodesk made it free – no ads, no watermarks, no catches. It's popular with architects,
