Frame-by-frame animation made fun and approachable for all ages. FlipaClip brings 2D animation to mobile in the most hands-on way possible. Create cartoons, storyboards, animated skits, or even whiteboard explainer videos using layers, onion-skinning, timeline controls, and audio syncing. It’s like a flipbook come to life – but with powerful precision.

Animators, educators, and kids all find FlipaClip an easy entry point to the world of animation. You can add voiceovers

and background tracks directly in the app and even export your animations as videos, GIFs, or image sequences.

9. Wombo Dream

Platforms: Android, iOS

AI-generated artwork from text prompts, instantly and endlessly. Wombo Dream is an AI-powered art generator that turns words into vibrant, often surreal artwork. Just type in a prompt like “ancient city under the sea” or “cyberpunk jungle,” pick a style (realistic, mystical, anime, etc.), and watch as Dream creates a unique piece in seconds.

The results range from trippy to stunning, and you can download or remix as much as you like.

Wombo Dream recently added AI-powered image input, so you can give it a rough sketch or existing photo and have the AI build upon it.

10. PhotoScan by Google

Platforms: Android, iOS

Breathe new digital life into your old photo albums. PhotoScan solves a long-standing problem: scanning printed photos using your phone – without glare, distortion, or blur. Unlike snapping a basic photo, PhotoScan takes multiple exposures from different angles, aligns them, and removes reflection and shadow automatically. The result is a high-quality, glare-free digital image.

Perfect for archiving family photos, saving childhood memories, or digitizing keepsakes.

PhotoScan integrates directly with Google Photos, so you can auto-backup your scans and even have them automatically enhanced or sorted into albums.

From AI art to old-school frame-by-frame animation, from beat-making to high-fidelity audio capture, these apps are the toolkit of the next generation of mobile creators. You don’t need a studio. You just need a phone – and a little inspiration.
