

Privacy, permissions and app behaviour

Take back control from nosy Android apps

Privacy on Android is not one big switch. There are a hundred small decisions hiding behind buttons called Allow, While using the app, Ask every time, Don't allow, Nearby devices, Files and media, Photos and videos, Microphone, Camera, Location, Contacts, SMS, and Notifications. Most people tap through these prompts as if they are speed bumps. A power user treats them like keys.

Because that is what permissions are. Every permission is a key to some part of your phone. Camera access lets an app see through your lens. Microphone access lets it hear audio. Location access tells it where you are. Contacts access reveals

people you know. SMS access may expose OTPs and messages. File access may open the cupboard where your documents, screenshots, scans, downloads and photos live. When an app asks for permission, it is not asking for politeness. It is asking for power.

Android has become much better at showing and limiting that power. Google's Android privacy page highlights Privacy Dashboard, permission controls, camera and microphone indicators, and the Google Play Data safety section as user-facing privacy tools. It says Privacy Dashboard can show which apps accessed sensitive data such as camera, microphone and loca-
