

Tech Support and Customer Service Impersonation

Hello sir, I am talking from tech support...

With the rapid digitization of financial services, customer support has become a crucial aspect of resolving issues. However, fraudsters have turned this necessity into an opportunity, posing as official tech support or customer service representatives to manipulate unsuspecting victims. These scams involve cybercriminals impersonating banks, e-commerce platforms, or tech companies to gain access to personal data, bank accounts, or digital wallets.

Scammers often create fake helpline numbers, use phishing techniques, and employ psychological manipulation to trick

people into sharing sensitive information. As digital transactions become more commonplace, the sophistication of these scams continues to evolve, making it imperative for individuals to stay vigilant. This chapter explores how these scams operate, the red flags to watch for, and the measures one can take to avoid falling victim.

How scammers operate?

Tech support and customer service impersonation scams thrive on deception and urgency. Fraudsters use multiple techniques
