

Create a video podcast

Make video add value without compromising your podcast audio

For years, “podcast” effectively meant something you listened to. That boundary has blurred. Many shows are now filmed, clipped for social platforms, and consumed interchangeably as audio or video. YouTube treats podcast episodes as videos inside a podcast playlist and permits audio-only playback. Spotify lets creators upload video episodes while distributing audio to other listening platforms through RSS. Apple Podcasts now supports HLS video for eligible shows and lets listeners switch between video and audio-only playback while keeping their place.

The lesson is not that every podcast needs a three-camera studio. Video is another way to package the same core conversation. Your audio must still work when somebody locks their phone, drives to work or listens through a podcast app.

Decide why you are adding video

Before buying a camera, decide what video contributes to your podcast that audio can't deliver.

For interviews, facial expressions and body language can strengthen the conversation. A technology podcast may ben-
