

Implementation Tip: Most MDMs auto-tag devices; create a BYOD VLAN 50 with ACLs that limit access to mail and HR SaaS only.

IoT & Smart-sensor policy

IoT endpoints – from RFID readers in warehouses to Zigbee temperature probes – outnumber laptops two-to-one by 2026. Keep them fenced:

Control	Why	How
Dedicated VLAN 60	Limits botnet lateral movement	Tag all IoT switch ports, deny VLAN 60 → Corp except MQTT broker.
MAC-Address Whitelist	Blocks rogue cameras	Use switch <code>mac-address table static</code> commands.
Firmware-Patch Window 30 days	IoT CVEs up 37% YoY	Cron job pulls vendor RSS feeds; Nagios alerts overdue devices.
East-West IDS	Sniffs unusual chatter	Deploy Zeek on a mirror port; email alerts >1 MB outbound.

Temporary Contractors & Guests

For 90-day SAP consultants or a week-long audit team, apply the Least Privilege / Auto-Expire model:

1. **Role-Based Account:** Create contractor-SAP role granting only required servers.
2. **NAC or RADIUS Voucher:** Use Portnox or switch MAC-auth to drop them in VLAN 70 with Internet plus specific host exceptions.
3. **Time Bomb:** AD account expiry = contract end date; disable sooner if HR flags.
4. **MFA & Logging:** Same standards as employees.
5. **Exit Checklist:** Collect badges, revoke VPN, wipe loaner laptops.

Automation Snippet (AzureAD PowerShell):

```
New-AzureADUser `
-DisplayName "Ritika-SAP-90d" `
-PasswordProfile @{ForceChangePasswordNext
Login=$true;Password="TempP@ss987"} `
-AccountEnabled $true `
-UserPrincipalName "ritika.sap@corp.local" `
-JobTitle "Contractor" `
-Department "SAP" `
-UsageLocation "IN" `
-AccountExpiryDate (Get-Date).AddDays(90)
```
