

These APs provide stable wireless coverage across the area, enabling wireless VIGI cameras (such as the VIGI C540-W, C440-W and C340-W) to connect without running long Ethernet cables.

The network's core typically includes a TP-Link router that assigns IP addresses and handles internet connectivity, while a VIGI NVR (Network Video Recorder) or the VIGI Security Manager software or mobile app is used to monitor, configure, and record footage from all cameras.

To ensure smooth video performance, features like VLANs, QoS (Quality of Service), and bandwidth control can be enabled. This hybrid wired/wireless deployment model provides flexibility, stability, and scalability—ideal for homes, businesses, or large properties needing reliable 24/7 surveillance.

B. Solar-Powered Remote Surveillance from TP-Link

VIGI surveillance cameras, when paired with TP-Link solar panel models, offer a highly adaptable and eco-friendly security solution for off-grid or remote locations. Designed for continuous monitoring, this setup ensures uninterrupted video capture without relying on traditional power sources. The TP-Link solar panels efficiently harvest sunlight to keep the cameras powered, even in areas where electrical infrastructure is lacking. This makes them ideal for farms, construction sites, orchards, and rural properties.

Advantages of Solar Solution:

- No Dependence Electrical Infrastructure. Operates entirely off-grid, reducing electricity costs.
- Eco Friendly: Solar Energy minimizes Carbon Footprint.
- 24/7 Monitoring: Battery Storage allows operations at night or cloudy weather.
- Easy Installation: Wireless Setup means there is no need for complex wiring.

TP-Link offers below models for Solar Based Solution's VIGI SP9030 & VIGI SP6020

Both models feature high-efficiency MPPT solar charge controllers, built-in lithium batteries with intelligent auxiliary heating, and rugged IP66-rated weatherproof enclosures—

Simultaneously, wired VIGI cameras (such as the VIGI C400HP) can be plugged directly into the same PoE switch, receiving both power and network connectivity through a single cable.

ensuring optimal performance in extreme environmental conditions. Both systems support remote management, smart LED status indicators, and wide-angle mounting adjustability, delivering scalable, clean energy solutions for modern surveillance needs.

C. VIGI Cloud VMS Dashboard & Details

1. Cloud-Based Architecture

- **Description:** Fully cloud-hosted video management platform, eliminating the need for on-premises Hardware to host VMS Server.
- **Benefits:**
 - Reduces hardware and maintenance costs.
 - Enables easy scalability and remote access.
 - Supports centralized monitoring across multiple locations.

2. Remote Access & Multi-Platform Support

- **Web Portal Access:** Full functionality through any modern web browser (Chrome, Firefox, Edge, Safari).
- **Mobile App Support:** VIGI mobile application (iOS/Android) provides live view, playback, alerts, and configuration.
- **Cloud Authentication:** Secure login via TP-Link ID.

3. Live View, Real-Time Monitoring & Playback via VIGI PC Client

- **Multi-Camera Viewing:** View up to 64 channels simultaneously with customizable layouts.
- **Timeline Navigation:** Scrollable timeline with event markers and thumbnails.
- **Snapshot & Export Tools:** Extract still images or video clips in multiple formats (MP4, JPG).

4. AI-Powered Video Analytics

- **Motion Detection:** Detects general movement within the frame.
