

6. Device Management

- **Plug-and-Play Onboarding:** Auto-detection and registration of VIGI cameras via TP-Link Cloud.
- **Firmware Management:** Remote firmware upgrade and batch update support.
- **Device Health Monitoring:** Real-time status, uptime, and error logs for all connected devices.
- **Third-Party Camera Support:** ONVIF Profile S compliance for integration with compatible third-party IP cameras.

7. Multi-Site & Multi-User Management

- **Hierarchical Organization:** Structure sites into branches/locations with grouped devices.
- **User Roles & Permissions:**
 - Admin, Operator, Viewer roles.
 - Custom permission sets for camera access, event viewing, and configuration rights.
- **Audit Logs:** Detailed activity logs for all users for compliance and troubleshooting.

8. Security & Compliance

- **Cloud Security:** Hosted on secure TP-Link cloud infrastructure with regular vulnerability patching.
- **User Authentication:** Supports strong passwords and session timeout policies.

9. VIGI VMS Dashboard

- Displays Device Status, whether Offline, on the dashboard.
- Displays and updates the latest Events as and when they occur.
- Displays a Map of the Site Location and Map can be navigated when another site is selected.

D. Support Flowchart:

The support structure of a technical company is designed to ensure seamless customer assistance, efficient issue resolution, and continuous service improvement. It typically includes multi-tiered support levels—ranging from front-line helpdesk teams for basic inquiries to specialized technical engineers for complex issues. This structure is reinforced by knowledge bases, ticketing systems, and escalation protocols to manage and track customer interactions.
