

Let AI plan trip resolutions

Use AI copilots to dream, design and tweak vacations in 2026

For years, planning a trip has meant 30 tabs, 10 blogs, 4 flight sites, 3 WhatsApp groups, and at least one meltdown in front of a spreadsheet.

In 2026, AI chatbots have to be your travel planning guides. Travel blogs and tools now explicitly recommend them as starting points for itinerary planning – right up there with your usual suspects like Google Flights and Maps. At the same time, the travel industry itself is baking LLMs into its apps – from Google’s AI-powered Flight Deals and planning “canvas” to Booking.com’s AI Trip Planner powered by OpenAI models and Perplexity-driven tools for Expedia and Tripadvisor.

1. AI-generated ideas based on budget

Let’s say your resolution is: “Travel more, but smarter and within budget.” You don’t even know where yet – just a rough window, a budget, and vibes (“mountains, food, not too touristy”).

Instead of manually cross-checking 20 “Top 10 places in X” listicles, you can have AI triage the planet for you.

Use Gemini + Flight Deals for destination discovery

Google is rolling out an AI Mode in Search plus a Flight Deals
