

Simulate the conversation, correcting my phrases and suggesting more natural alternatives.”

Practise a couple of times; by the time you reach the actual reception desk, you'll sound a lot more confident.

5. Real-time suggestions

Even the best itinerary dies on contact with reality: rain, closed museums, energy crashes, wrong bus, surprise festival.

AI can become your on-trip control centre.

Food and neighbourhood decisions on the fly

Between Google Maps, Tripadvisor data and Perplexity's integrations, you can do “what's good around me right now” smarter.

Example prompt to Perplexity/Gemini:

“I'm in [area/neighbourhood] right now (here's a dropped pin link).

Looking for:

- Lunch within ₹[budget]
- Vegetarian options
- Casual vibe, not touristy if possible

Suggest 3–5 places within 15 minutes walk or a short metro ride, with:

- Why you recommend each
- Any must-try dish.

Use recent reviews.”

You can then cross-check quickly on Maps for distance and photos.

Weather-driven plan B

When rain or heat wrecks your plan:

“Tomorrow in [city] looks like heavy rain all day (around [temp], [mm] precipitation).

I had originally planned outdoor activities: [list].

1. Propose an indoor-friendly alternate Day 2 using my existing hotel location.
2. Include museums, cafes, local experiences, and indoor viewpoints.

WRAP-UP: AI MAKES “TRAVEL MORE” EASY

The idea of “travelling more in 2026” stops being a vague wish when you:

- Let Gemini + Flight Deals match vibes to destinations and dates
- Let Perplexity Travel build and refine your day-by-day skeleton with live web data and trusted reviews
- Let ChatGPT Go turn your preferences into themed days, packing lists and micro-plans
- Let OTA-integrated AI tools handle booking discovery and filters

Under the hood, the travel industry is treating LLMs as a new infrastructure layer. You don't have to care about that. What matters is: you now have a personal travel desk that never sleeps, is surprisingly patient with “dumb” questions, and can re-plan Day 3 at midnight after a thunderstorm ruins your beach day.

3. Try to preserve at least one highlight from the original plan, if feasible.”

Pair this with a quick weather check in your usual app.

Micro-decisions and safety checks

Unsure if something is worth it?

“I'm choosing between these two activities tomorrow in [city]:

- [Activity A description, cost, time]
- [Activity B...]

Compare them in terms of:

- Travel time from my hotel
- Reviews and recent feedback
- Value for money
- Physical effort level

Based on my profile (I prefer slower, less crowded experiences), which one would you recommend and why?”

Worried if a night bus is safe, or if a particular area is sketchy after dark? Ask Perplexity/Gemini and look for recent posts, discussions, and official advisories.

If you only do one thing after this chapter, make it this:

Pick one trip you've been postponing, and spend 30–45 minutes tonight asking your AI assistants to: 1) shortlist destinations and dates, and 2) spit out a rough 4–7 day itinerary. Then put a reminder in your calendar to price-check flights next week.

Congratulations: you've gone from “I should travel more” to “Trip 1 of 2026 is officially in motion.”
