

Pro Tip: Set a daily reminder to write at least one sentence – cultivating the habit of journaling consistently is easier with a small, manageable goal.

Loop Habit Tracker

Minimalistic and data-focused, Loop Habit Tracker helps you track habits with detailed statistics and charts. If you love analytics and want clear, quantifiable proof of your progress, this app is a great option.

1. Add a New Habit

- Tap the plus button, name your habit (e.g., “Walk 10,000 steps”), and set how often you want to do it (daily, weekly, or specific days).

2. Mark Your Completions

- Once you’ve accomplished a habit for the day, tap to mark it “done.”
- The habit’s streak increases with each consecutive completion.

3. Review Your Statistics

- Loop charts your success rate and helps you identify patterns – like which days you’re most likely to skip.
- Look at these graphs regularly to stay motivated.

4. Set Reminders

- Schedule notifications to remind you at specific times (e.g., around your usual exercise time).

5. Export Your Data

- Loop allows you to export your habit data to spreadsheets, making it easier to share or analyse your results further.

Pro Tip: Keep your daily “done” check-ins simple and consistent. Habits flourish when the barrier to tracking them is low.

Streaks

If you own an Apple device, Streaks might be your perfect habit-tracking companion. With its elegant interface, you can focus on building streaks of daily habit completions and watch your chain grow each day you succeed.

1. Select Your Habits

- Add up to 12 habits at once, either from Streaks’ suggested list (e.g., “Drink Water,” “Walk the Dog”) or create your own custom goals.

2. Customise the Interface

- Choose colours, icons, and arrangement to reflect each habit.
- The app’s layout is simple, focusing on big, tappable icons to mark tasks done.

3. Use Health App Integration

- On iOS, Streaks integrates with the Health app for automatically tracking certain activities like steps or workouts.
- This eliminates the need to manually mark them as done.

4. Set Reminders and Timers

- Get notified at your chosen time or start a timer for tasks like “Brush Teeth for 2 minutes.”

5. Maintain Streaks

- Don’t break the chain. The longer your streak, the more motivating it feels to keep going.
- If you miss a day, the streak resets – an effective push to stay consistent.

Pro Tip: Use the widget function on iOS to see your current streaks at a glance on your home screen.

Toggl Track

Toggl Track is a lightweight time-tracking app that records how much time you spend on tasks, projects, or even daily routines. Whether you want to bill clients accurately or understand where your day’s hours go, Toggl Track’s single-tap time recording can help.

1. Set Up Projects and Tasks

- Create broad categories for your activities – e.g., “Work,” “Household Chores,” “Studying.”
- You can also add specific tasks under these categories if you need more detail.

2. Start the Timer

- Tap the play button to begin tracking time for a specific task.
- Pause or stop the timer when you’re done.

3. Add Entries Manually

- If you forget to start the timer, add a time entry manually (e.g., “30 minutes reading”).

4. Review Your Logs

- Toggl Track shows how you spend your time daily or weekly in charts and detailed summaries.
- Use filters to see which tasks consume most of your hours.

5. Set Up Reminders

- Enable idle detection if you’re away from your phone or computer for a while – the app will prompt you to confirm if you want that time tracked.

Pro Tip: Toggl Track also provides browser extensions and desktop apps, so your time-tracking syncs seamlessly across devices. At the end of the week, review your logs to fine-tune your schedule. 📌
