

Benchmarking Apps

Understand the limits of your phones

When it comes to smartphones, performance is often more than just raw speed – it's about efficiency, stability, and reliability. Benchmarking and testing apps help you assess your device's capabilities, detect potential hardware issues, and ensure you're getting the performance you expect.

Whether you're a power user pushing your device to the limit, a gamer seeking the smoothest experience, or a curious enthusiast who just wants to keep an eye on system health, the apps below offer detailed insights and numbers you can trust.

Geekbench

Geekbench is widely recognized for its comprehensive CPU and GPU tests. It generates a single-core and multi-core score that you can compare against other devices. Geekbench tests everything from raw processing power to memory bandwidth,

giving you a holistic view of your phone's performance.

1. Install & Open

- Download Geekbench and launch it.

2. Select Benchmark

- Choose "CPU" for processor tests or "Compute" for GPU-based benchmarks.

3. Run the Test

- Tap the "Run Benchmark" button; the process takes a couple of minutes.

4. Review Scores

- Compare your single-core and multi-core scores to the device database.
