

10 > Use tech responsibly

limits on them. Use the insights to make informed decisions about where to cut back.

How to set screen time limits

When it comes to restricting your device time, screen time monitoring is just half of the battle. Once you understand your device usage patterns, implementing limits can help you regain control over your digital life like never before.

Setting device-based limits for better control

Most smartphones offer built-in settings to limit screen time:

- **iOS Devices:** Go to Settings > Screen Time > App Limits. Set daily time limits for categories or individual apps.
- **Android Devices:** Navigate to Settings > Digital Wellbeing & Parental Controls > Dashboard. Tap on an app to set a timer.

Force yourself to schedule device-free times

Designate specific times of the day as device-free, such as during meals or an hour before bedtime. Use your device's Do Not Disturb feature to minimise interruptions during these periods.

How to use family screen time settings

If you have children, use family sharing features to set screen time limits for their devices. This not only helps them develop healthy habits but also fosters a better family environment.

Digital Wellbeing tools and resources

Apart from restricting your screen time, also learn to enhance your digital wellbeing with tools designed to promote mindfulness and balance.

Meditation and mindfulness apps (Headspace, Calm)

- **Headspace:** Offers guided meditations to help reduce stress and improve focus.
- **Calm:** Provides sleep stories, breathing programs, and relaxing music to improve mental wellbeing.

Educational tools for healthy tech use

Apps like Forest encourage you to stay away from your phone by growing virtual trees when you don't use it. If you exit the app, the tree dies, providing a fun incentive to stay focused.

Tech features that provide work-life balance

Use features like Focus Mode on Android or Focus Filters on iOS to block distracting apps during work hours or personal time. Customise settings to align with your daily routine.

2) Declutter your digital spaces (Emails, apps, files)

A cluttered digital space can be as overwhelming as a messy

room, adding to your sense of stress and overall digital anxiety. Organising your emails, apps, and files can improve productivity and reduce stress in ways that can surprise you.

How to organise email Inboxes

An overflowing inbox can hinder your ability to find important messages, eating up time and impacting your digital efficiency like nobody's business. In 2025, here's how you will fix this once and for all.

How to effectively label and archive emails

- **Create Labels or Folders:** Categorise emails by project, sender, or priority.
- **Archive Old Emails:** Move older messages out of your inbox to reduce clutter.
- **Use Stars or Flags:** Mark important emails for easy access later.

Setting up filters for frequent contacts

Set up automatic filters to sort emails from specific senders into designated folders. This ensures you never miss important messages and can prioritise your responses.

Delete unused apps

Unused apps consume storage and may pose security risks if not updated, and it's better to nuke them out of your devices if you haven't spared a thought for them in a long time.

How to identify low-usage apps

- **iOS:** Go to Settings > General > iPhone Storage. You can see when you last used each app.
- **Android:** Use the Files by Google app to identify rarely used apps.

Reclaim storage by uninstalling apps

Once you've identified unused apps:

- **Uninstall Them:** Free up space and reduce clutter.
- **Offload Unused Apps (iOS):** This removes the app but keeps its data, allowing you to reinstall it later if needed.
