

- **Collaboration:** Share pages with team members for collaborative projects.
- **OneNote:**
 - **Freeform Note-Taking:** Write or draw anywhere on the page.
 - **Integration with Microsoft 365:** Easily insert files from other Microsoft applications.
 - **Hierarchy Organisation:** Use notebooks, sections, and pages for structure.

Tips for efficient task tracking

1. **Centralise Your Tasks:** Keep all your to-dos in one app to avoid fragmentation.
2. **Prioritise:** Use tags or labels like “High Priority,” “Medium,” and “Low” to focus on what’s important.
3. **Set Deadlines:** Assign due dates to tasks to ensure timely completion.
4. **Use Checklists:** Break down large tasks into smaller, manageable steps.
5. **Regular Reviews:** At the start or end of each day, review your task list to plan effectively.

Example of setting up a task in Notion:

1. Open Notion and navigate to your task management page.
2. Click on “Add a new task”.
3. Enter the task name and details.
4. Assign a due date and priority level.
5. Add any sub-tasks or checklists if needed.
6. Tag the task with relevant projects or categories.

2) Automate routine tasks and workflows

Automation saves time and reduces the potential for human error in repetitive tasks. By automating routine processes, you can focus on more critical aspects of your work. Like a proper boss!

Basic automation tips

Introduction to IFTTT and Zapier

- **IFTTT (If This Then That):**
 - **Purpose:** Connects different apps and devices through simple conditional statements called applets.
 - **Use Cases:** Automatically save email attachments to cloud storage, turn on smart lights when you arrive home, etc.
- **Zapier:**
 - **Purpose:** Connects web applications and automates complex workflows without coding.
 - **Use Cases:** Sync new leads from Facebook Ads to a CRM, post Instagram photos to Twitter natively, etc.

How to create an IFTTT applet:

1. Sign up and log into IFTTT.
2. Click on “Create” to start a new applet.
3. Select a Trigger:

- Click on “If This”.
 - Choose a service (e.g., Gmail).
 - Select a trigger event (e.g., “New email labelled”).
4. Select an Action:
 - Click on “Then That”.
 - Choose an action service (e.g., Google Drive).
 - Select an action event (e.g., “Upload file from URL”).
 5. Configure and Finish:
 - Customise the action fields.
 - Click “Finish” to activate the applet.

Workflow automation with AI

Artificial Intelligence (AI) has become more accessible and can significantly enhance productivity by handling data-intensive tasks.

AI tools for data sorting and analysis

- **Microsoft Power Automate:**
 - **Features:** Automates workflows across applications using AI.
 - **Use Cases:** Extract data from PDFs, automate data entry, and generate reports.
- **Google Cloud AI Platform:**
 - **Features:** Offers tools for data analysis and machine learning models.
 - **Use Cases:** Predictive analytics, customer segmentation, and trend analysis.

How to leverage AI for task management

1. **Automated Scheduling:** Use AI assistants like x.ai to schedule meetings based on participants’ availability.
2. **Email Management:** Employ AI tools that prioritise emails and suggest responses.
3. **Data Entry Automation:** Utilise AI to extract data from documents and input it into databases.

Example of using AI in Microsoft Power Automate:

1. Access Power Automate through your Microsoft account.
2. Choose a template or create a new flow.
3. Select AI Builder to add AI capabilities.
4. Configure the AI model (e.g., form processing).
5. Set up the flow to trigger when new data is available.
6. Test and activate the workflow.

3) How to master time management with technology?

Effective time management is essential for productivity. Technology offers tools and techniques to help you make the most of your time.

Tracking time with apps

Understanding how you spend your time can highlight areas for improvement.
