

Clearing cache and managing app storage

- **Clear App Cache:** Apps store temporary data (cache) to speed up loading times, but excessive cache can consume valuable space.
 - **For Android:** Go to Settings > Storage > Cached Data to clear all app caches, or Settings > Apps > [App Name] > Storage > Clear Cache for individual apps.
 - **For iOS:** While iOS doesn't have a universal cache clearing option, you can offload unused apps by going to Settings > General > iPhone Storage, then select apps to offload.
- **Manage App Storage:** Uninstall apps you no longer use.
 - **For Android:** Use Settings > Apps to see installed apps and uninstall.
 - **For iOS:** Long-press an app icon until it jiggles, then tap the X to delete.

How to organise photos, videos, and downloads

- **Back Up Media Files:** Use cloud services like Google Photos, iCloud, or Dropbox to back up and then delete media files from your device.

- **Clean the Downloads Folder:** Regularly delete unnecessary files in your Downloads folder.
- **Organise Files:** Use file management apps to sort documents and media into folders for easier access and management.

Tools for reducing file bloat

- **Storage Management Apps:**
 - **Files by Google:** Suggests files to delete, including duplicates and large files.
 - **Cleaner apps:** Be cautious with third-party cleaner apps; use reputable ones to avoid malware.
- **Compress Files:** Use built-in compression tools or apps to reduce file sizes, especially for large documents or media files.

How to optimise battery health

Battery performance of your smartphone and tablets diminishes over time, but proper management can prolong battery lifespan and enhance device usability.

Tips for prolonging battery lifespan

- **Avoid extreme temperatures:** Keep your device out of direct sunlight and away from heat sources.
- **Charge smartly:**
 - **Partial charges:** Lithium-ion batteries last longer when not fully discharged or charged.
 - **Avoid overnight charging:** Disconnect your device once it reaches 100% to prevent overcharging.
- **Use original chargers:** Certified chargers ensure proper voltage and current.

Managing battery-intensive apps

- **Identify power-hungry apps:**
 - **Android:** Settings > Battery > Battery Usage.
 - **iOS:** Settings > Battery, scroll down to see usage by app.
- **Restrict background activity:**
 - **Android:** Settings > Apps > [App Name] > Battery > Background Restriction.
 - **iOS:** Settings > General > Background App Refresh.
- **Update apps:** Developers optimise apps for better battery usage; keep them updated.

Using power-saving modes effectively

- **Activate Power-Saving Mode:**
 - **Android:** Swipe down the notification panel and tap Battery Saver.
 - **iOS:** Settings > Battery > Low Power Mode.
- **Customise Settings:**
 - **Reduce Screen Brightness.**
 - **Turn Off Vibration.**
 - **Disable Unnecessary Notifications.**

Managing notifications and background apps

Excessive notifications and background processes can slow down your device and drain the battery.

Setting up 'Do Not Disturb' for improved productivity

- **Activate Do Not Disturb:**
 - **Android:** Settings > Sound > Do Not Disturb.
 - **iOS:** Swipe up (or down on newer models) to access the Control Center and tap the crescent moon icon.
- **Customise Settings:**
 - **Allow Exceptions:** Permit calls from favourites or repeated calls.
 - **Schedule Downtime:** Set specific hours for Do Not Disturb to activate automatically.

Reviewing background permissions

- **Limit Background Data:**
 - **Android:** Settings > Network & Internet > Data Usage > App Data Usage.
