

Use tech responsibly

Well, it's not just about screen time

If there's one thing true about technology more than anything else is that it's extremely addictive. Be it young toddlers or senior citizens, it's easy to spend more time on screens than we'd like and doom scroll with aplomb. Therefore, managing screen time is essential for maintaining a healthy balance between our digital and real lives. This chapter provides practical steps to monitor and control your screen usage effectively going into the New Year 2025.

1) Manage your screen time for digital wellbeing

Monitoring your screen time is the first step toward better digital wellbeing. Several apps can help you keep track of how much time you spend on your devices.

Various features of Screen Time apps

- **Apple Screen Time:** Built into iOS devices, it provides

detailed reports on app usage, notifications received, and device pickups. You can set limits for specific apps and schedule downtime.

- **Digital Wellbeing (Android):** This feature offers insights into your app usage, allows you to set app timers, and includes a Focus Mode to minimise distractions.

How to set daily and weekly goals

Set achievable screen time goals to gradually reduce your usage. For example, if you currently spend five hours a day on your phone, aim to cut it down to four hours. Adjust your goals weekly based on your progress.

How to review your app usage patterns

Regularly review which apps consume most of your time. If social media apps dominate your usage, consider setting stricter
