

Snap Layouts, FancyZones & Window Mastery

Make Windows snap to your workflow

Once you start using virtual desktops, the next bottleneck becomes obvious: within each desktop, your windows are still behaving like toddlers – wandering, overlapping, and demanding attention.

Windows 11's real productivity upgrade isn't a hidden setting. It's a new windowing "language" built around three ideas:

1. **Snap Layouts:** quick, pre-designed layouts you can apply to any app window.
2. **Snap Assist + Snap Groups:** Windows helps fill the remaining spaces, then remembers those grouped layouts for later.
3. **FancyZones (PowerToys):** when the built-in layouts aren't enough, you design your own "zones" and snap windows into them like LEGO.

Microsoft officially supports Snap Layouts through Win + Z, hovering over the maximize button, or dragging a window to the top center of the screen.
