

Windows 11 Power User Checklist

Fifty tiny wins that add up to mastery

Now comes the fun part: prove it to yourself. This isn't a vague "are you a power user?" quiz. It's a 50-point checklist built around the exact features Windows 11 quietly rewards you for using: multitasking properly (virtual desktops + Snap), taming window chaos (Snap Layouts + FancyZones), having a Linux superpower ready (WSL), testing risky stuff safely (Windows Sandbox), automating routine chores (Task Scheduler), and not losing data when life happens (File History / Windows Backup + encryption where available).

50-point mastery checklist

A) Setup & safety baseline (1-10)

1. Checked your Windows edition/version/build once.
2. Confirmed TPM + Secure Boot status (or at least know where to check).
3. Verified Windows is activated and updating normally.
4. Created a restore point before making major changes.
5. Removed obvious OEM bloatware you don't use.
6. Disabled unnecessary startup apps (Task Manager → Startup).
