

A sandworm's cast (poo) looks like a pile of sand.

SandWorms

Sandworms live on the beach. They eat sand as they burrow and poo it out in loopy piles. Count the number of piles to guess how many sandworms there are.

Earthworms can eat their body weight in a day.

Sandworms eat sand and make U-shaped burrows.

Earthworms tunnel through the soil to create burrows.

Earthworm bodies are slimy and covered in many tiny, stiff hairs. This helps them to burrow and wriggle through the soil.

Earthworms

Earthworms can live for two to ten years.
