

FOOD SCIENTIST

JOB DESCRIPTION

Food scientists research and develop a wide range of food-related products, making sure they are safe and palatable for consumption. They develop new ingredients, test the quality of food items, check labeling for accurate nutritional information, and design or improve food manufacturing machinery to find ways of producing food more safely and efficiently.

SALARY

Junior scientist ★★★★★

Experienced scientist ★★★★★★

INDUSTRY PROFILE

Many job opportunities worldwide • Primary employers include food manufacturers, retailers and supermarket chains, and government research establishments

CAREER PATHS

A food scientist may find work with large food- and drink-manufacturing companies, retail chains, government food-inspection departments, public health laboratories, and academic research organizations. To gain seniority and responsibility, you can advance within large companies or move between organizations.

LABORATORY TECHNICIAN

You can start your career as an intern or part-time lab technician and train on the job while studying for a degree in a relevant subject.

GRADUATE To become a food scientist, you need an undergraduate or graduate degree in food science, food technology, or another related science subject.

FOOD DEVELOPMENT TECHNOLOGIST

Specializes in creating and developing new food products for manufacturing companies, supermarkets, and other food retailers.

FOOD SCIENTIST Once you are qualified as a food scientist, you can move into many different areas—such as food production, research, quality, and environmental health.
