

CAREER PATHS

The industry is tightly regulated, so you will need to complete approved training, finish an apprenticeship, and, in most states, obtain a license. Many electricians are self-employed or work as contractors for construction companies. Others are employed by manufacturers, engineering companies, or government bodies.

TRAINEE Apprenticeships are available and a vital part of becoming an electrician. These combine college study through community colleges or technical schools with on-the-job training for a complete overview of the electrician's role.

ELECTRICIAN Once qualified and licensed, you can take more vocational training courses to expand your range of skills or specialize in a specific area, to earn a better salary.

ENGINEERING TECHNICIAN
Works on industrial equipment, such as generators, production lines, and control systems. This job requires further training.

INSTALLATION ELECTRICIAN
Fits lighting, sockets, network cables, and other electrical equipment in commercial and domestic properties.

MAINTENANCE ELECTRICIAN Repairs, tests, and certifies equipment used by businesses to ensure they meet safety standards.

HIGHWAY ELECTRICIAN
Specializes in installing and maintaining street lighting, traffic controls, and other electrical equipment used by the transportation system.

SITE MANAGER
Oversees the entire electrical installation at a business or residential construction site, or manages the electrical systems in a factory.
