

FOCUS ON VEHICLE & NOT DISTANCE

When we have limited information, we become handicapped in terms of exact speed and distance. Thus, our Lazy Plan will focus on direction and vehicle. It implies that our plan will allocate our resources to the suitable asset classes i.e. focus on the direction of the plan.

Speed refers to the rate of return. Distance refers to the profits in absolute term. If the direction is right and the asset classes are suitably selected, the speed and distance will take care of themselves.

SPEED NOT IN OUR HANDS

As we just discussed, the rate of return i.e. speed is not in our control. Market forces and a lot of external factors influence the same. So, we need to focus on vehicle and direction and the rest should take care of itself on its own.
