

Let us begin with the first tier i.e. to have a cash flow management system in place. A healthy cashflow practice is the key to a healthy financial plan. This is because the cash flow system is the only way through which new money comes into the financial plan. So, how it is channelized, spent or invested, plays a very critical role in the long term health of the financial plan. Cash flow management system includes receiving income and allocating it to expense and investment purposes.

All our expenses like grocery, education, healthcare, utilities, maintenance, EMI payments, leisure, travel etc. will be taken care of here. It is a systematic approach through which all our expenses and short term liabilities are met.
