He invested Rs.4.9 lac for 10 years, until he turns 60. At age 60, that amount would have grown to become Rs. 15.2 lac. Use the compounding formula to calculate this amount. Rs. 4.9 lac compounded at 12% for 10 years (60-50)
 $\Rightarrow 4,88,668 \times (1+12\%)^{10} = 15,17,730$
