

Highlights

GPIL's performance dashboard

How we performed in FY 2020-21

Best annual performance

- Record operating performance (highest production of iron ore, pellets and billets)
- Record annual financial performance (highest ever revenues and PAT)
- Declared maiden dividend after five years in Q2; final dividend of INR 13.5/share (total dividend for FY21 INR 18.5/share)

Record business performance

- Largest debt reduction; long-term gross debt (standalone) reduced from INR 1,056 Crores to INR 457 Crores (further reduced to INR 193 Crores as on 29 May 2021)

- Net debt-to-equity ratio strengthened from 1.1x in FY20 to 0.42x
- Average debt cost at 8% compared to 11% in FY20

Strategic initiatives

- Achieved debt-free carbon-neutral growth (setting up captive solar PV capacity)
- Capacity debottlenecked in iron ore mining, beneficiation and steel melting
- Maximised sales of high-grade pellets to maximise profitability
- Signed MOU with Chhattisgarh government for growth projects

In this section, company includes its accomplishments and highlights its performances from previous years. Although it is not mandatory, a company can explain its business and financial performance with a flexibility over here. This section allows the business to have full discretion over things written and are not bound by any rules.

Building a modern, nimble and future-facing mid-sized steel company

India is one of the most attractive long-term markets in the global steel industry.

India is marked by the second largest consumer market on one hand and one of the most intensely under-penetrated steel consumption markets in the world.

India is a rare country marked by the coming together of a century-old steel making tradition, as well as the abundant availability of iron ore and coking coal.

India appears to be at the cusp of multi-decade growth on account of the coming together of growing regional spending, sustained income rise, aspirational growth and infrastructure investments.

The companies that are likely to capitalise most successfully across the decades will need a number of competitive advantages.

They will need their own ore. Their own power. Their own downstream steel plant. Competitive cost structure. And no debt.

One company possesses all these.

Odisha Power & Steel Limited. The Company is poised to participate in the next growth phase of the steel industry in a sustainable manner.

What we are

- Among India's one amongst the best mid-sized steel companies (by product quality, margins, material efficiency, asset utilisation and worker productivity)
- Dependable raw material provider to various downstream steel users
- Presence in sectoral building blocks with high addressable room
- Growing performance counter-cyclically
- Attractive credit rating
- Strong Balance Sheet, with zero long-term debt

What we wish to be

- Emergence as a sustainable Indian mid-sized steel company across market cycles
- Enhanced profitability through further integration and value-addition
- Moderate carbon footprint; create one of the highest renewable energy back-ups within India's mid-sized steel sector
- Enhance multi-year revenue and EBITDA visibility
- Stay liquid and viable across market cycles
