

$$\begin{aligned}
 &= \text{Revenue} / \text{Total Assets} \\
 &= \text{Rs. 6410 Cr.} / \text{Rs. 5008 Cr.} \\
 &= 1.3 \text{ Times}
 \end{aligned}$$

To conclude, the company is able to generate 1.3 times revenue in comparison to its total assets.

.2 Working Capital Turnover

It refers to the ratio between the net revenue of a business and the required working capital.

Balance Sheet	
Debt	Assets
~~~~~	~~~~~
Equity	Fixed Assets
~~~~~	~~~~~
Non-current Liabilities	~~~~~
~~~~~	~~~~~
Current Liabilities	Current Assets
~~~~~	~~~~~

$$\begin{aligned}
 &\text{Current Assets} \\
 &(-) \text{Current Liabilities} \\
 & (=) \text{Working Capital}
 \end{aligned}$$

Formula: $\text{Revenue} / \text{Working Capital}$

$$\text{Working Capital Turnover} = \text{Rs. 6410 Cr.}$$

$$(\text{Rs. 4042} - \text{Rs. 3320})$$

$$\begin{aligned}
 &= \frac{6410}{700} = 9x
 \end{aligned}$$

This roughly translates to 9x. Therefore, we can say that the company can turn its working capital into revenues significantly or the company has low working capital requirement.
