Source: screener.in

From chart 1 we can get the Book value

$$\text{Book Value} = \text{Share Capital} + \text{Reserves and Surplus}$$

$$= 64 + 1694 \text{ (Mar 21')}$$

$$= 1750 \text{ Cr.}$$

Rather than considering the current market price per share, we must take the current market cap because the book value in the denominator is book value per share.

Chart 2

Bata India Ltd

₹ 1,747 +0.44%
27 Jun 4:01 p.m.

bata.in BSE: 500043 NSE: BATAINDIA

Market Cap	₹ 22,455 Cr.	Current Price	₹ 1,747	High / Low	₹ 2,262 / 1,550
Stock P/E	218	Book Value	₹ 141	Dividend Yield	0.23 %
ROCE	8.16 %	ROE	5.77 %	Face Value	₹ 5.00

Add ratio to table

eg. Promoter holding

EDIT RATIOS

$$\text{Market Cap} = \text{Rs. 22,541 Cr.}$$

Source: screener.in

Here we can say the company invested only 1750 cr. into the business and has generated a value worth ₹ 22,541 Cr.

$$\text{Price / Book} = \text{Rs. 22,541 Cr.} / 1750 \text{ Cr.}$$

Thus, the company has a Book value of = 13x

This ratio can then be used exactly like P/E to identify companies when they are trading below median levels.
