

CONSIDER ANOTHER EXAMPLE

Aim:

Let's say you are searching for companies that operate on a large scale and have a strong market presence. You are seeking businesses which exhibit high levels of profitability and capital utilisation efficiency.

Using the following **syntax** in a screener query, you would shortlist companies that meet the following criteria:

- **Market Capitalization > 500:** This filters for companies with a market capitalization greater than 500 units (this could be million, billion, or any other currency unit depending on your platform's settings).
- **Price to Earnings < 15:** This filters for companies with a price-to-earnings (P/E) ratio less than 15. A lower P/E ratio typically indicates that a company's stock is undervalued relative to its earnings.
- **Return on Capital Employed > 22%:** This filters for companies with a return on capital employed (ROCE) greater than 22%. ROCE measures a company's efficiency in generating profits from its capital investments.
