

# Screens

## Quarterly Results

This screener focuses on screening stocks based on their quarterly financial results. Users can filter stocks based on metrics such as revenue growth, earnings growth, profit margins, and other key performance indicators reported in quarterly earnings releases. It helps investors track the financial performance of companies over specific quarters and identify potential investment opportunities or risks.

## Valuation Screens

This screener is designed to identify stocks based on their valuation metrics. Users can screen stocks based on valuation multiples such as price-to-earnings ratio (P/E), price-to-book ratio (P/B), price-to-sales ratio (P/S), or enterprise value-to-EBITDA (EV/EBITDA). It helps investors identify stocks that are undervalued or overvalued relative to their fundamental metrics, aiding in investment decision-making processes.

## Popular Stock Screens

This screener offers predefined stock screens based on popular investment strategies or criteria. Users can choose from a selection of predefined screens such as “Dividend Aristocrats,” “Growth Stocks,” “Value Stocks,” or “Technical Breakouts” to identify stocks that meet specific investment themes or criteria. It provides a convenient way for investors to quickly identify potential investment opportunities that align with their investment style or objectives.
