

Assessing Results and Company Selection

Several factors are indicative of companies that may offer attractive investment opportunities with the potential for growth and income generation.

Let's consider the tab on **capacity expansion**, a strategy often indicative of growth potential within companies. The companies investing in expanding their capacity are likely anticipating an increase in demand for their products or services. As they utilise their expanded capacity, they are expected to see growth in sales, driving revenue, and potentially boosting shareholder value.

To identify such companies, the screen looks for those whose **fixed assets have either doubled over the past three years or increased by at least 50% in the past year**. This criteria reflects a substantial investment in infrastructure, indicating the company's commitment to expanding its operations and potentially increasing production.
