

Let's consider another screen.

The **capital work in progress (CWIP)** enlists assets under construction or development. It requires that the **combined value of netblock and capital work in progress surpass 1.5 times the netblock from the preceding year or the capital work in progress from the previous year.**

To narrow down the selection to a more manageable number of companies, let's refine the criteria further. By **reducing the debt-to-equity ratio greater than 1**, we aim to filter out companies with higher leverage, focusing on those with stronger balance sheets. After making this adjustment, we reran the query and observed a reduction in the number of companies meeting the criteria. With **81 companies identified**, we can further refine the screening process by increasing the sales threshold for the previous year to 9500 crores.
