

Chapter 4 - Screener First Cut

1. Chart Analysis: When executing the following syntax from the previous example: “Market Capitalization > 500, Price to Earnings < 15, Return on Capital Employed > 22%”, the results will display data for several companies.

For instance, consider the example of Swadeshi Polytex Ltd.

A screener in chart analysis is a tool used by investors and traders to filter and narrow down potential investment opportunities based on specific criteria.

Here are the features commonly included in a screener for chart analysis:
