

1.1 Price: The price chart displays the company's performance across 1 month, 6 months, 1 year, or 3 years, offering insights into stock movement across price zones. It includes volume data, highlighting volume surges or declines, aiding in understanding market activity.

1.2 PE Ratio (Price-to-Earnings Ratio): The PE ratio is calculated by dividing the current market price of a stock by its earnings per share (EPS). It indicates how much investors are willing to pay for each dollar of earnings generated by the company. A low PE ratio may suggest that a stock is undervalued, while a high PE ratio may indicate that it is overvalued.
