

MANUALLY OPERATED REPEATING RIFLES (1896–1905)

Many countries designed and introduced into military service their own varieties of bolt-action repeating breech-loaders. Those of Mauser (see pp. 164–65) from Germany, however, were regarded as especially robust, accurate, and serviceable. Countries sought to purchase their rifles from Mauser, from other manufacturers making Mauser rifles under license, or, as in the case of the US, were sufficiently influenced by the quality of the design that they acquired rights to manufacture their own version.
