

► **KRUPP FIELD GUN**

Date 1895

Origin Germany

Length (Barrel) 8½ft (2.6m)

Caliber 87mm

Range 1½miles (2.3km)

This breech-loading, rifled field gun was fitted with high brackets to make it sit in an elevated position in the carriage. This enabled it to fire over the parapet of a fortified site. It is thought to have been captured by British forces from Boers at Pietersburg (modern-day Polokwane), South Africa, in 1901.

Elevated barrel

Wooden wheel

Steel carriage lacks recoil control

Wooden brake block

Recoil recuperator helped gun to return to firing position after recoil

Barrel elevated to 35 degrees on wheeled carriage

Recoil springs

Wheels could also be detached, and the gun fired from a built-in "siege platform"

▲ **6IN HOWITZER**

Date 1896

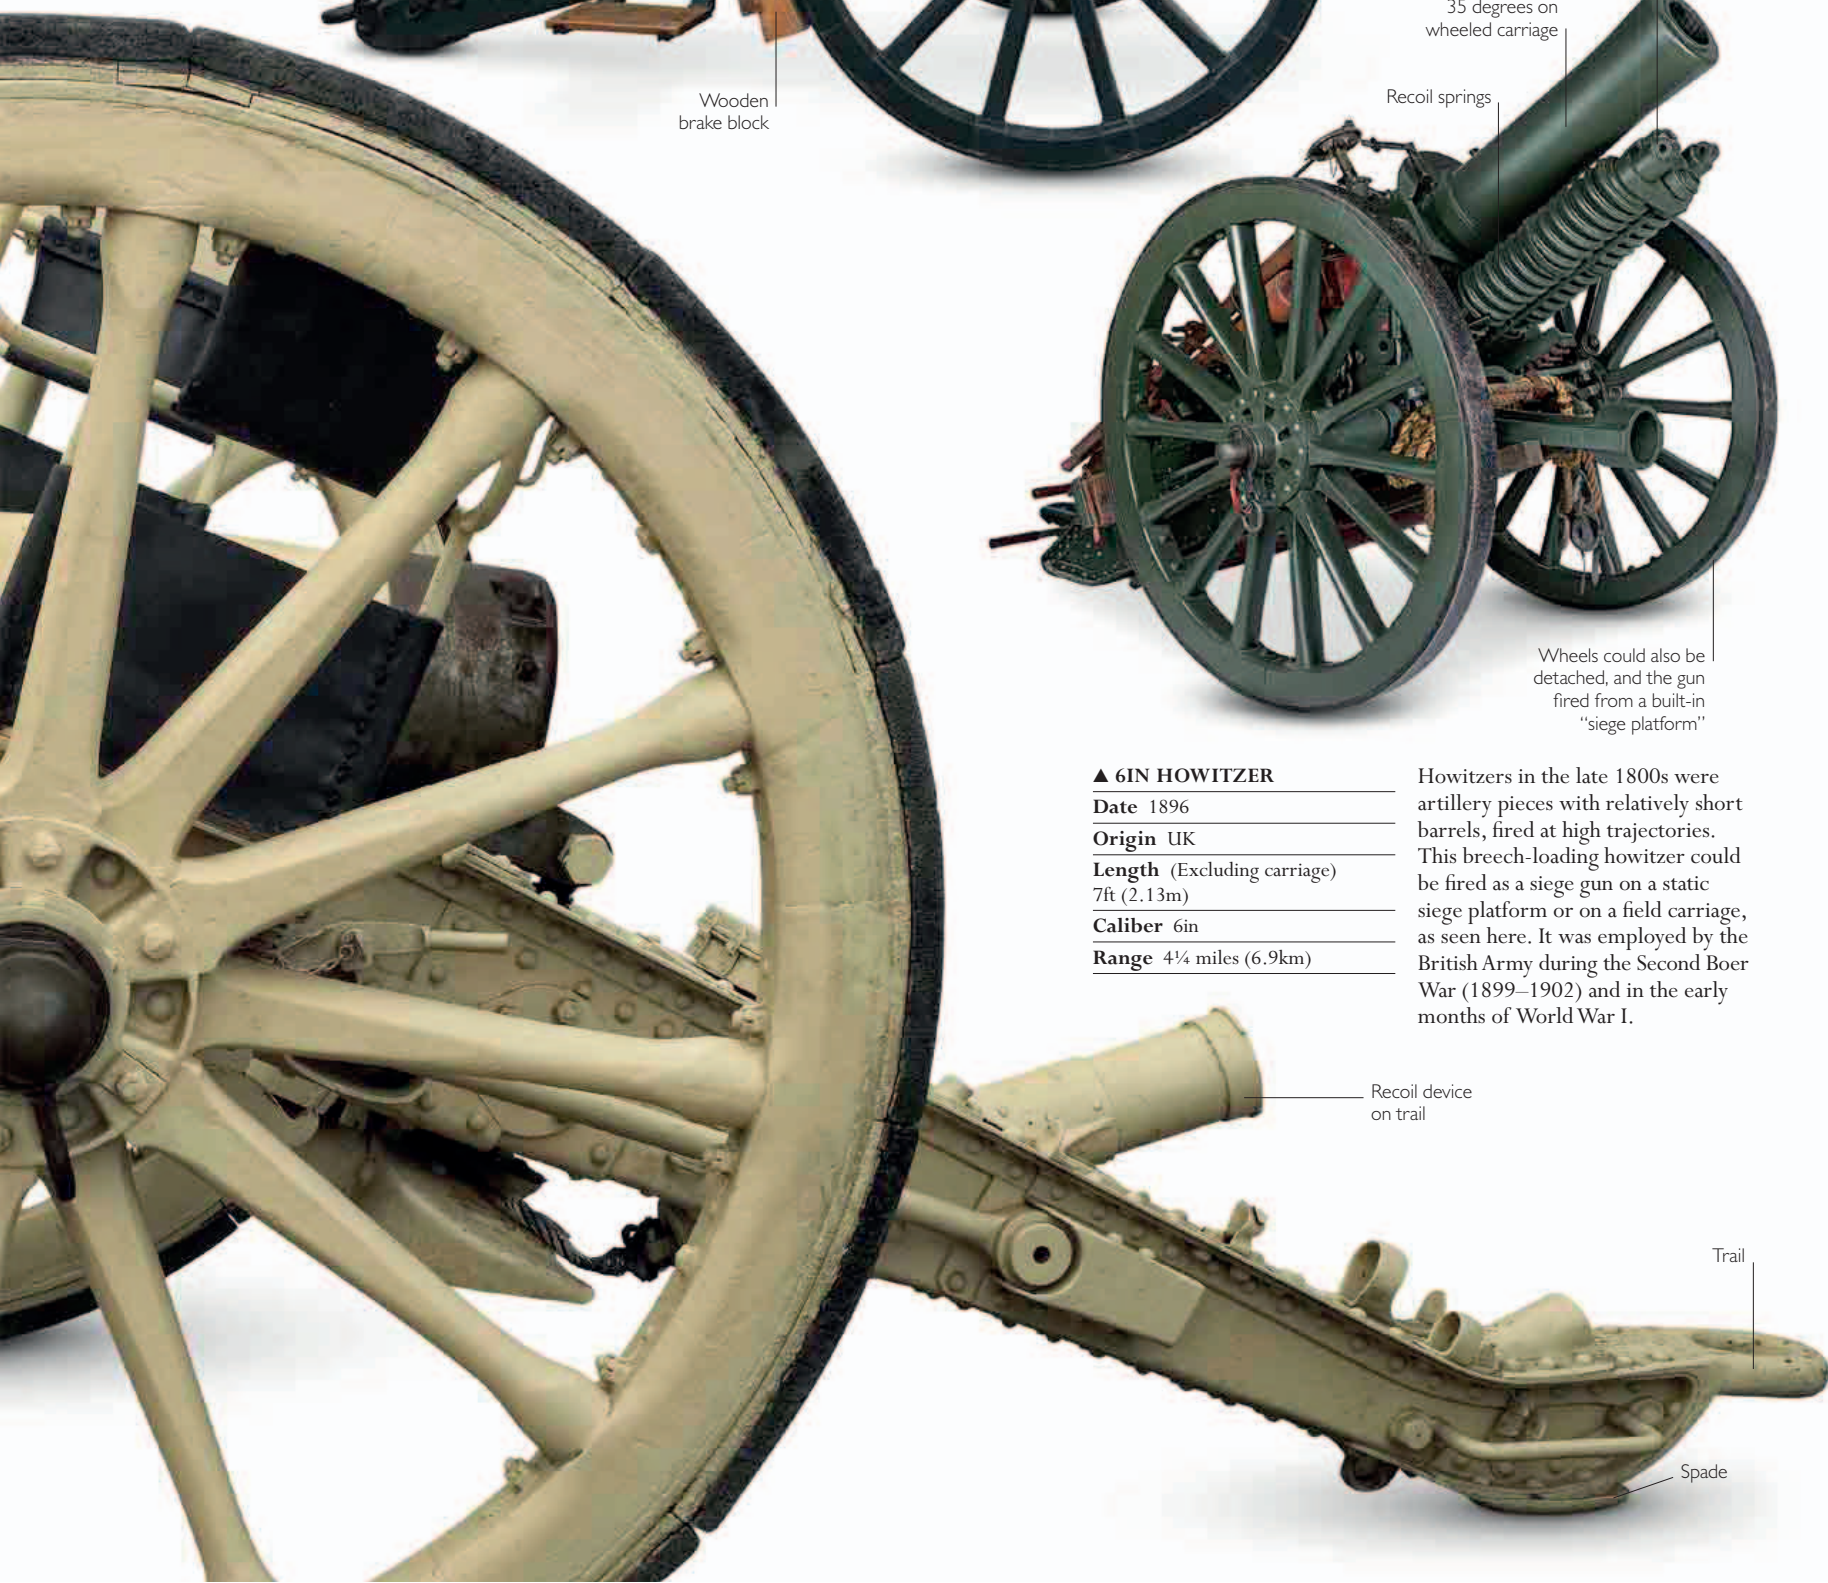

Origin UK

Length (Excluding carriage) 7ft (2.13m)

Caliber 6in

Range 4¼ miles (6.9km)

Howitzers in the late 1800s were artillery pieces with relatively short barrels, fired at high trajectories. This breech-loading howitzer could be fired as a siege gun on a static siege platform or on a field carriage, as seen here. It was employed by the British Army during the Second Boer War (1899–1902) and in the early months of World War I.
