▲ COMBINATION WHEEL-
LOCK/
MATCHLOCK MUSKET

Date 1650 (mechanism)

Origin Germany

Barrel 46½in (118cm)

Caliber .70in (17.7mm)

In this gun, wheel-lock and matchlock systems are set beside each other on the same lock plate. The wheel-lock mechanism and stock are typical of those made in the Netherlands and in parts of what is modern-day Belgium and Germany around 1650.

▼ SWEDISH
BALTIC FLINTLOCK

Date c.1650

Origin Sweden

Barrel 38½in (98cm)

Caliber .4in (10mm)

This early flintlock rifle, with a characteristic "Baltic" lock from the south of Sweden, has the distinctive "Goinge" type short butt stock reminiscent of weapons of a still earlier date. Compared with later examples, its simple lock is crudely made, but it features the frizzen common to all flintlocks (see pp. 38–39).
