

▲ DUTCH DOUBLE-BARRELED FLINTLOCK

Date	c.1650
Origin	Netherlands
Barrel	19¾in (50.3cm)
Caliber	.51in (13mm)

Multibarreled pistols gave travelers the advantage of additional firepower if attacked. The barrels on this pistol can be rotated by hand, in what is known as the Wender system. Once the upper barrel has been fired, a catch is drawn back to allow the two to be turned, bringing the unfired barrel up from beneath. Each barrel has its own pan and frizzen.

▲ FLINTLOCK PISTOL

Date	c.1650
Origin	England
Barrel	6in (15.3cm)
Caliber	.59in (15mm)

This all-steel pistol is interesting because its mechanism is exposed on the outside of the stock. Even the spring-loaded tumbler, which is normally on the inside of a flintlock, is visible on the side of the gun. The tumbler governs the striking action of the cock via the mainspring when the trigger is pulled.

▲ ENGLISH FLINTLOCK PISTOL

Date	c.1650
Origin	England
Barrel	14¾in (34.2cm)
Caliber	.57in (14.5mm)

English gunmakers produced many thousands of plain but functional military firearms during the period of the English Civil War in the middle of the 17th century. This pistol is of the type that was usually issued in pairs to cavalry troopers and carried in two holsters mounted on the front of the saddle. It has a lock plate and stock shaped like those of a wheel-lock, which was a fashionable design at this time.
