▲ SWORD BAYONET

The Baker rifle was supplied with a sword bayonet that could be used alone or mounted on the rifle. At 24in (61cm) long, it was unwieldy, but it was necessary to compensate for the rifle being so much shorter than other weapons then in use.

Single-edged, straight blade for hacking and thrusting

200-yard (183-m) sight

300-yard (274-m) sight

Ramrod pipe

Large head to help a user ram in a tight-fitting ball

▲ RAMROD

The steel rod was used to ram the charge and projectile into the barrel.

Gunpowder wrapped in paper

Lead ball wrapped in paper

▲ PAPER-WRAPPED CARTRIDGE

Each cartridge contained a charge of powder and the ball. It was torn open with the teeth, with the ball held in the mouth. A small portion of the charge was poured into the primer pan and the rest down the muzzle. The paper would then be rammed down to form a wad, and the ball, wrapped in a patch taken from the patchbox, rammed down on top.
